SUMMARY

Full-stack developer building bilingual (Arabic/English) products end-to-end: desktop apps with Electron & Tauri, web platforms with Next.js & React, and Node.js/Express APIs with MongoDB, PostgreSQL and SQLite. I ship complete systems UI, API, database and deployment and design RTL-native interfaces rather than translating after the fact.

SKILLS

Frontend: React, Next.js, Vue, Nuxt, Tailwind CSS, RTL/i18n
Desktop: Electron, Tauri, vanilla JavaScript
Backend: Node.js, Express, Strapi, Prisma, NextAuth, JWT
Data & Deploy: MongoDB, PostgreSQL, SQLite, Docker, Render, Cloudflare Pages, GitHub Actions

SELECTED PROJECTS

Moaz AIR Warehouse Management System • React • TypeScript • Express • MongoDB • Live demo available
Production warehouse platform (inventory, clients, collections, accounting) with role-based access and a full Arabic/English RTL interface. Deployed: React SPA on Cloudflare Pages, Dockerized API on Render.

GLOW Bilingual E-Commerce Platform • Next.js 16 • Prisma • NextAuth • next-intl
Complete EN/AR storefront plus admin panel: auth with email verification, reviews, wishlists, order management and dashboard analytics. PostgreSQL (Neon) with SQLite dev fallback; Netlify-ready.

Hospital Operations Tracker • Electron • SQLite • Arabic-first
Offline-first desktop app for hospital staff: supplies intake, operation workflow, daily medications board, local accounts and print-ready reports. Full Arabic RTL UI built natively.

Spider-Man Educational Word Game • Vanilla JS • Web Audio API
Kid-friendly word-learning game (5 levels, villains, lives, scores) with a teacher content dashboard. All sounds synthesized at runtime zero dependencies, zero asset files.

MORE WORK

Mohtawa (E-*HI) content platform suite (Next.js front, admin dashboard, Express/Mongo backend, hardened API variant) • Ektesad platform (Vue/Nuxt + Strapi CMS + Next.js dashboard) • Money Board finance dashboard • Blog platform (Strapi CMS + Next.js) • Auth microservices (Node + JWT) • odysseus local-first AI assistant framework (Python, Docker) • ayadty clinic desktop app with licensing (Tauri + SQLCipher).

More: github.com/mahmoudcod 22 public repositories, all projects above include source.
